

Figure S1. Effects of Sakulora™ on bowel movement diary parameters

Each value represents the mean and S.D.

The number sign and asterisks denote significant differences between the Sakulora™ and placebo groups at # $p < 0.05$ (Welch's *t*-test) and * $p < 0.05$ and ** $p < 0.01$ (Linear mixed model with baseline values as covariates, and the time point, group, interaction between the time point and group, interaction between the baseline and time point, and study participants as factors), respectively.
